PROFESSIONAL SUMMARIES

Results-driven MERN Stack Developer with 2+ years of experience in building scalable, high-performance web applications using React.js, Node.js, TypeScript, and MongoDB. Skilled in API integration, responsive UI, Docker, AWS deployment, and Agile development practices.

EDUCATION

B.E in Information Technology, Shri Shankaracharya Group Of Institution

Jul '17 — Aug '21
Bhilai, India

WORK EXPERIENCE

Software Developer

RailWorld India pvt. Ltd.

Jul '23 — Present

Raipur, India

Developed and maintained a Cab Service Management System using React.js for building dynamic, responsive, and user-friendly interfaces.

- Deployed the full-stack application ensuring high availability, scalability, and optimized performance.
- Collaborated with the backend team to integrate RESTful APIs, improving data flow and reducing response time.
- Implemented state management using React Hooks and optimized rendering for better user experience.
- Utilized Git for version control and contributed to Agile development cycles including sprint planning and code reviews.
- Enhanced application reliability by performing debugging, testing, and performance optimization across modules.
- Documented technical workflows and API specifications for internal team use and future maintenance.
- Maintained MongoDB database for managing cab, driver, and booking details efficiently.
- Followed best coding practices and version control strategies with Git and GitHub for collaborative development.
- Optimized React rendering using memoization, lazy loading, and efficient component structuring for improved speed.
- Integrated third-party APIs and payment gateways for enhanced application functionality and user convenience.
- Designed and developed responsive UIs using React.js, Tailwind CSS, and reusable component architecture for scalable frontend development.

INTERNSHIP

"Completed **PRM Certification Internship (Edyoda, 2022)** building a MERN stack app with React, Node.js/Express, and MongoDB. Also completed **JavaScript course (Web Dev Army, April 2023)** to enhance web development skills."

SKILLS

Frontend Apollo Client, WebSockets, Vercel, Netlify, VS Code, React.js, GraphQL

Backend Node.js, Express.js, Nest.js, RESTful APIs, GraphQL (Server), Apollo Server

Database PostgreSQL, MongoDB, Mongoose, Data Modeling, Query Optimization, Schema Design

Tools Git, GitHub, Jira, Postman, API Documentation

PROJECTS

OSV Bot - Slack Integration [Link](#)

Jul '25 — Aug '25

- Developed a standalone MERN stack application integrating OSV (Open Source Vulnerabilities) with Slack to automate npm dependency security checks. It scans package.json using OSV Scanner, sending real-time Slack alerts with detailed vulnerability data or safe confirmations. Built with Node.js, Express, MongoDB, and React, featuring a dashboard for monitoring vulnerabilities, enhancing security visibility, and reducing manual review efforts across development teams.

Blog App MERN Stack [Link](#)

Aug '25 — Sep '25

- Developed a full-stack blogging platform using the MERN stack with secure JWT authentication, CRUD operations for posts, comments, and likes. Integrated Cloudinary for image storage, optimized MongoDB queries, and deployed scalable APIs on AWS with Docker. Built a responsive UI using React hooks and Redux, ensuring smooth cross-device performance. Implemented modular architecture and automated deployment, enhancing scalability, maintainability, and overall developer productivity.

ReactFileExplorer [Link](#)

Aug '25 — Oct '25

- Developed a React-based file explorer with dynamic folder navigation, file upload, and search features. Used reusable components, React Hooks, and Tailwind CSS for responsive design, ensuring optimized performance and a clean, user-friendly file management experience.

SearchUi [Link](#)

Jul '23 — Sep '23

- Implemented a search UI with dynamic filtering, debounced input handling, and API-based data fetching for fast, accurate results. Optimized rendering performance with React Hooks and memoization. Ensured responsive design using Tailwind CSS for usability across devices.

Finance Tracker [Link](#)

Nov '25 — Nov '25

- Finance Tracker (MERN Stack) – Built a full-stack finance management application with a React frontend and a Node.js/Express backend (migrated from Python as per requirement). Implemented JWT auth, CRUD transactions, receipt uploads, budgets, recurring entries, and deployed on Vercel + Render.

NEW SECTION (1)

Technical Expertise

- **BACKEND**

Node.js & Express.js development with RESTful API design
Experience building scalable microservices architecture
API integration, debugging, and performance optimization
Advanced troubleshooting, debugging, and application upgrades

- **DATABASE**

Strong proficiency in MongoDB (Aggregation, Indexing, Query Optimization)
SQL & MongoDB database design and performance tuning
Managing relational + NoSQL databases in production environments

- **FRONTEND**

Built responsive, high-performance UIs using React.js, Hooks, and reusable component architecture
Integrated RESTful APIs and optimized state management with React Hooks, Context API, and custom hooks
Improved performance using memoization, lazy loading, code splitting, and efficient rendering patterns
Debugged and optimized UI functionality using Chrome DevTools, React DevTools, and best coding practices
